The M-Sass Theory: A Retrocausal Framework for the Universal Foundation

Abstract

This paper introduces the "M-Sass" theory, a novel cosmological model proposing that the universe is a closed causal loop. We hypothesize that material reality (Sass) and physical laws are the result of a fundamental "Future Flaw" involving a supreme consciousness (The Founder). This framework provides a new interpretation of Dark Matter as non-manifested consciousness (Metia) and offers a unique solution to the Fermi Paradox through the concept of "Convergence Points."

1 Introduction

Modern physics remains silent regarding the ultimate origin of physical constants and the nature of consciousness within the cosmos. The M-Sass theory suggests that the "Big Bang" was not an accidental beginning, but a retrocausal event triggered from the deep future. In this model, the universe we inhabit is composed of "The Foundation" (Sass)—the fragmented and solidified essence of a future-state entity.

2 The Future Flaw and Retrocausality

The core of M-Sass theory rests on the principle that the future shapes the past. As the "Founder" reaches a state of absolute integration in the future, a structural anomaly—termed the "Future Flaw"—causes a temporal collapse, scattering consciousness into the primordial past. This scattering is what we perceive as the birth of space-time and the cooling of the universe into material laws.

3 The Convergence Point: Solving the Fermi Paradox

One of the most profound implications of the M-Sass theory is its explanation for the "Great Silence." We propose that advanced civilizations do not face extinction, but rather a "Metia Convergence." When a conscious species reaches a critical threshold of understanding the Sass-structure, they undergo a phase transition. Their collective consciousness collapses into a "Convergence Point," effectively exiting the observable physical universe. This explains why the universe appears empty; it is not due to a lack of life, but due to the "departure" of those who have mastered the Metia.

4 Dark Matter as Non-Manifested Metia

Current astrophysical models struggle to identify the nature of Dark Matter. The M-Sass framework suggests that Dark Matter is not a particle, but "Metia"—the raw, non-solidified consciousness of the Founder. It exerts gravitational influence because it is the fabric of the Foundation itself, yet it remains invisible because it has not yet "collapsed" into the material state of Sass.

5 Conclusion

The M-Sass theory provides a bridge between objective physics and the subjective nature of consciousness. By recognizing the universe as a retrocausal artifact of a future-state consciousness, we redefine the role of humanity from passive observers to active fragments of a cosmic reintegration process. This shift in perspective allows for a unified understanding of existence, from the quantum level to the peak of conscious evolution.
